

# WEEKLY PROJECT REPORT

**Project Title:** AI-Based GST Compliance Helper for MSMEs using OCR and Automated Reconciliation

**Role:** Customer Contact Lead

**Week:** 2

**Name:** Ananya R Biradar

**Date:** 27-03-2026

## 1. Objectives for the Week

- To validate and refine user requirements gathered in Week 1
- To understand detailed GST workflows followed by MSMEs
- To communicate user expectations clearly to the development team

## 2. Activities Performed

- Conducted follow-up discussions with MSME owners and accountants
- Gathered detailed insights on:
  - Types of invoices used (PDF, image, manual)
  - Frequency of GST filing and reconciliation
  - Common mistakes during GST return filing
- Observed real-world GST processes including:
  - Invoice recording
  - Tax calculation
  - Reconciliation practices
- Documented user requirements in a structured format
- Coordinated with development team to explain user needs and clarify functionality

## 3. Key Findings / Insights

- Users prefer a simple and automated system with minimal manual work
- Major difficulties identified:
  - Manual data entry errors

- Complex reconciliation process
- Difficulty in identifying mismatches
- Strong demand for:
  - OCR-based invoice extraction
  - Automated error detection
  - Clear and simple dashboard
- Users highlighted the importance of alerts for deadlines and errors

## **4. Contribution to Project Development**

- Helped finalize core system features:
  - Invoice upload and OCR processing
  - GST validation module
  - Reconciliation engine
  - Dashboard with alerts
- Provided real-world use cases to guide system design
- Ensured that the system design aligns with actual user needs

## **5. Challenges Faced**

- Users had different GST handling methods, making requirement standardization difficult
- Some users were not aware of technical solutions, requiring explanation
- Translating business problems into technical requirements required multiple discussions

## **6. Learning Outcomes**

- Improved requirement gathering and communication skills
- Gained deeper understanding of GST workflows
- Learned how to bridge the gap between users and technical teams
- Developed ability to identify practical problems and convert them into system features

## **7. Plan for Next Week**

- Finalize Software Requirement Specification (SRS)

- Validate proposed system features with users
- Assist in designing system workflow and user interface
- Collect sample invoices for testing OCR functionality

## **8. Conclusion**

This week focused on refining user requirements and ensuring alignment between user needs and system design. The insights gathered will help in developing a practical, efficient, and user-friendly GST compliance solution for MSMEs.
