WEEKLY PROJECT REPORT

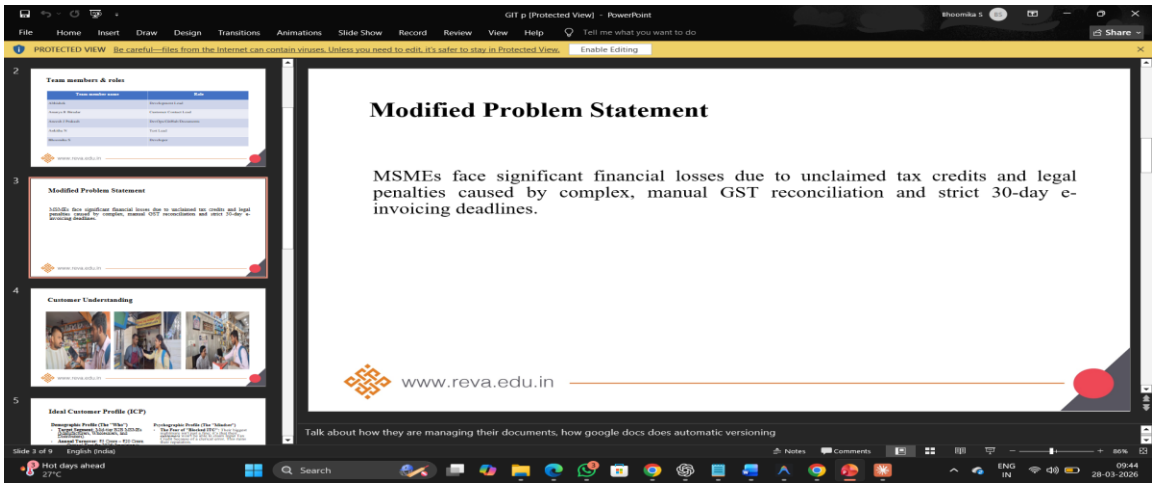
Project Title: AI-Based GST Compliance Helper for MSMEs using OCR and Automated Reconciliation
Role: PPT Preparation & Survey Support
Week: 1
Name: Ankitha N
SRN: R23EF025

1. Objectives for the Week

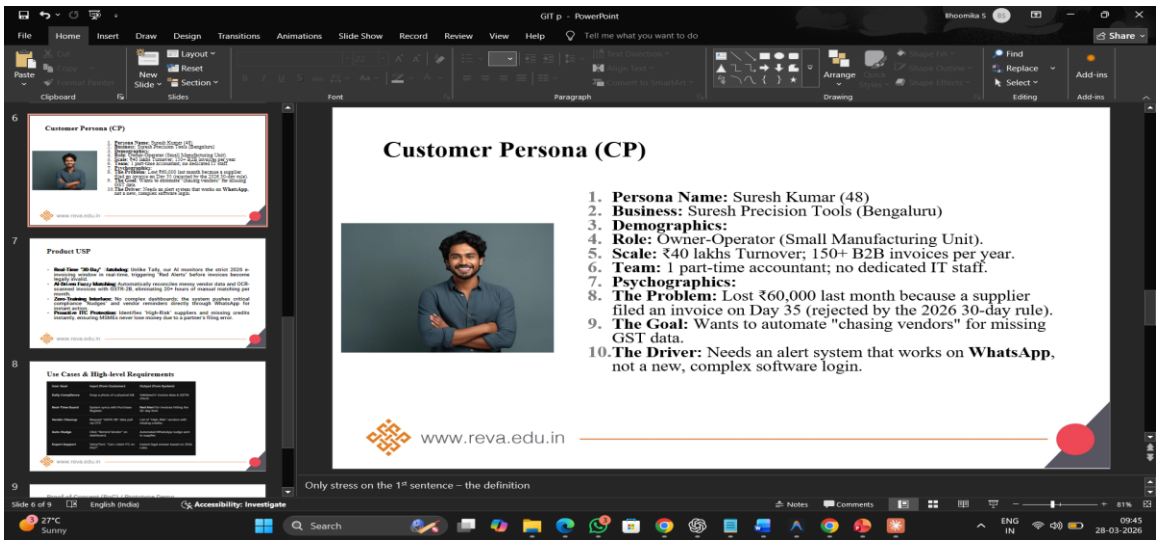
- To understand GST-related challenges faced by MSMEs through direct interaction
- To assist the team in conducting surveys and gathering requirements
- To prepare presentation materials based on collected insights

2. Activities Performed

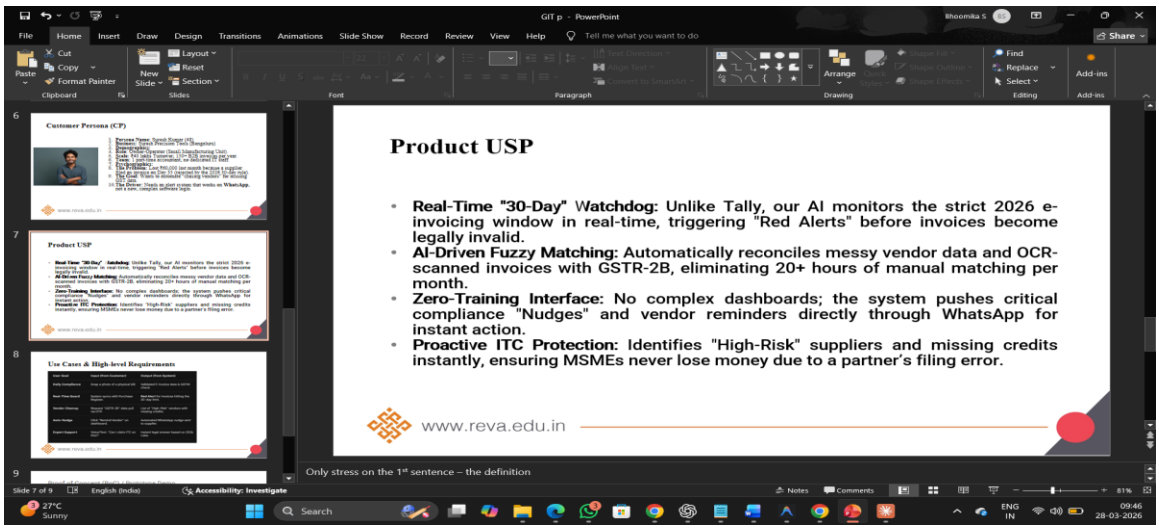
- Participated with the team during interaction with small business owners and users
- Assisted in conducting surveys and understanding real-world GST problems
- Observed invoice handling methods, GST filing challenges, and reconciliation issues
- Prepared the weekly project PPT including Problem Statement, Customer Persona, Product USP, and Use Cases



Modified Problem Statement
MSMEs face significant financial losses due to unclaimed tax credits and legal penalties caused by complex, manual GST reconciliation and strict 30-day e-invoicing deadlines.
www.reva.edu.in
Talk about how they are managing their documents, how google docs does automatic versioning



Customer Persona (CP)
1. Persona Name: Suresh Kumar (48)
2. Business: Suresh Precision Tools (Bengaluru)
3. Demographics:
4. Role: Owner-Operator (Small Manufacturing Unit).
5. Scale: ₹40 lakhs Turnover; 150+ B2B invoices per year.
6. Team: 1 part-time accountant; no dedicated IT staff.
7. Psychographics:
8. The Problem: Lost ₹60,000 last month because a supplier filed an invoice on Day 35 (rejected by the 2026 30-day rule).
9. The Goal: Wants to automate "chasing vendors" for missing GST data.
10. The Driver: Needs an alert system that works on WhatsApp, not a new, complex software login.
www.reva.edu.in
Only stress on the 1st sentence – the definition



Product USP
Real-Time "30-Day" Watchdog: Unlike Tally, our AI monitors the strict 2026 e-invoicing window in real-time, triggering "Red Alerts" before invoices become legally invalid.
AI-Driven Fuzzy Matching: Automatically reconciles messy vendor data and OCR-scanned invoices with GSTR-2B, eliminating 20+ hours of manual matching per month.
Zero-Training Interface: No complex dashboards; the system pushes critical compliance "Nudges" and vendor reminders directly through WhatsApp for instant action.
Proactive ITC Protection: Identifies "High-Risk" suppliers and missing credits instantly, ensuring MSMEs never lose money due to a partner's filing error.

Only stress on the 1st sentence – the definition

3. Key Findings / Insights

- MSMEs rely heavily on manual processes leading to frequent errors
- GST reconciliation is complex and time-consuming
- Lack of awareness leads to financial losses
- Need for automation and simple systems

4. Contribution to Project Development

- Participated in customer interaction and requirement gathering
- Contributed to identifying user problems
- Prepared and designed PPT slides (Problem Statement, Customer Persona, Product USP, Use Cases)
- Helped communicate project ideas clearly through presentation

5. Learning Outcomes

- Understood GST workflow and real-world challenges
- Learned presentation and communication skills
- Improved problem analysis skills

6. Plan for Next Week

- Improve presentation with more insights
- Assist further user research
- Support development team
- Add detailed use cases

7. Conclusion

This week focused on understanding user problems and presenting them effectively through a structured PPT.
