WEEKLY PROJECT REPORT

Project Title: AI-Based GST Compliance Helper for MSMEs using OCR and Automated Reconciliation

Role: Customer Contact & Technical Support

Week: 1

Name: Aneesh J P

Date: 26-03-2026

1. Objectives for the Week

- To interact with MSME users and understand their GST-related challenges
- To learn GST concepts and identify internal conflicts in GST processes
- To understand real-world requirements for the system
- To manage and maintain the project Git repository

2. Interacted with customers and business owners to understand GST issues

- Gathered information about:
  - Challenges in GST filing and reconciliation
  - Errors faced during tax calculation and submission
  - Difficulties in managing invoices and compliance
- Studied GST concepts such as:
  - GST structure and components (CGST, SGST, IGST)
  - Input Tax Credit (ITC)
  - Filing procedures and compliance requirements
- Explored internal conflicts in GST such as:
  - Mismatch in invoice data and portal data
  - Errors in reconciliation
  - Complexity in tax calculations
- Worked on Git repository:
  - Managed version control
  - Performed commits and updates
  - Organized project files

3. Key Findings / Insights

- Many MSMEs face issues due to lack of proper GST knowledge
- Internal conflicts like invoice mismatch and ITC errors are common
- GST reconciliation is complex and time-consuming
- Businesses require:
    1. Simplified GST management system
    2. Automated error detection
    3. Easy-to-use compliance tools

4. Contribution to Project Development

- Provided real-world insights from customer interactions
- Identified important features such as:
    1. Automated GST validation

2. Error detection system
3. Simplified reconciliation process

5. Learning Outcomes

- Gained practical knowledge of GST and its real-world challenges
- Understood internal conflicts in GST systems
  Improved communication and requirement gathering skills
- Learned Git repository handling and version control

6. Plan for Next Week

- Analyze collected data and finalize system requirements
- Start designing system architecture and modules
- Work on database design for GST system
- Continue improving Git workflow and collaboration

7. Conclusion

- This week focused on understanding GST concepts, customer problems, and internal conflicts in GST systems. The insights gained will help in building an efficient and user-friendly GST compliance solution.
